RHINO EXTREME RV SEWER KITS Improved design for better performance.

New features include:

- An exoskeleton design that bears the brunt of abrasion, protecting the sewer hose from pinholes and helping to prevent leaks
- A hose that is both crushproof and collapsible
- Improved compression ratio for storage over the previous RhinoEXTREME design

All of the features that RVers are looking for in a complete kit. The RhinoEXTREME hose features new exoskeleton reinforcement, which protects the hose from pinholes and leaks by bearing the brunt of abrasion from use. ARMADA® AQUABLOCK™ WATERPROOFER & STAIN REPELLENT

Contains UV and mildew resistant agents. Most fabric manufacturers, including Sunbrella®, apply a fluorocarbon polymer to the cloth at the factory for waterproofing and stain repellency. This is the most durable and effective waterproofing technology currently known. Armada AquaBlock uses virtually the same fluorocarbon technology as the fabric manufacturers do to last an entire season. Application is therefore more effective, durable and easier to use than a less compatible agent. AquaBlock has been independently laboratory tested against the three leading waterproofing products in the marine industry and was found superior.

RECURVE R3 A weight distribution hitch that features adjustable sway technology. By simply adjusting the clamp, you can decide how much sway control is exerted on the trailer. The ReCurve R3 will distribute the weight of your trailer evenly across the axles of the tow vehicle and provide as much sway control as you choose. Or, turn the sway control completely off in dangerous or icy road conditions. Its top-loading spring bars give it more ground clearance than other hitches, and the streamlined design makes the hitch and the trailer move as one, while creating a sleek look. Hitch ball included.

6 RECURVE

WDH with Adaptive Sway Technology®

RECURVE R6 Our most user friendly weight distribution hitch, and it features premium adaptive sway technology. With other sway control hitches, turning can be an even bigger hassle than it usually is with a trailer because the sway control "locks" the trailer straight. With the ReCurve R6, the hitch will control your sway for normal driving, but when you turn, the sway control will automatically disengage, making maneuvering smoother and easier on the driver. The sway control can easily be turned completely off in dangerous or icy road conditions. Its top-loading spring bars give it more ground clearance than other weight distribution hitches, and the streamlined design makes the hitch and the trailer move as one, while creating a sleek and subtle look. Hitch ball included.

ROUND BAR WEIGHT DISTRIBUTING HITCHES Over five decades ago, Eaz-lift became the first patented weight distributing system in North America. Designed with fewer parts, forge-tapered round spring steel bars provide a smoother ride with interchangeable bars that have positive latching action for operation. Eaz-Lift has a broad selection of weight distributing hitches that include right and left hand sway control mounts and bolt together ball mounts providing adjustability of ball height and ball mount angle. Each hitch includes hook-up brackets, spring bars, chains, ball mount, shank and hitch pin, clip and bolt package for adjustable hitches.

Why Eaz-Lift Sway Controls are better

than cam-action type sway controls:

- Eaz-Lift Sway Controls do not create noise problems as does the cam-action type.
- Eaz-Lift Sway Controls do not reduce road clearance.
- Eaz-Lift Sway Controls are easily released when road conditions do not warrant their use...unlike cam-action type sway controls that depend upon hitch weight to operate and cannot be released on icy and oily road conditions where straight line action would possibly impair driving control.
- Eaz-Lift Sway Controls do not lose sway control ability during turns.

Camco's Magnetic Hitch Alignment Kit is designed for one-person hook-up on the first try every time. Easily visible balls take the guesswork out of linking up your hitch. Attach one guide to the tow vehicle and one to the trailer. Guides extend to 50" for easy viewing, and a swivel base allows the guides to be positioned directly above hitch and receiver. This system works with virtually any tow vehicle and any trailer: gooseneck trailers, fifth wheel trailers, horse trailers and boat trailers.

BALL MOUNTS Ball mounts are 2" x 2" and function as a weight carrying hitch. Ball mounts create a ball platform for attaching a hitch ball. The ball mounts or utility hitch bar length are determined by measuring from the center of the pull pin to the center of the hitch ball hole. The drop or rise is determined by measuring from the top of the mount to the top of the tongue. All 2" x 2" ball mount shank holes are 1", except 48282, which has a 3/4" hole.
