

## Crappie Slider Grubs

The crappie Slider grub was developed in the 1970s along with the weedless crappie slider head. Charlie developed this lure with its subtle tail action to imitate nature and trigger crappie bites. The weedless version allows fishing inside underwater tree limbs and brush. This grub has been used by many fishermen for trolling. It is a favorite for many crappie tournament fishermen. It is 1 3/4" long and is made of soft plastic. We have solid color, two and three color grubs, along with some laminate and core grubs. Approximately 50 or more grub colors are available.

## Weedless Crappie Slider

The weedless crappie slider is a pack that contains two rigged crappie slider grubs (rigged weedless) and two spare grubs. The grubs are rigged Texas style with an off set hook with the tip buried into the grub.

**Rigged**

This shows a rigged Crappie Slider. The hook is buried up inside the soft plastic. I always punch the hook through the grub a few times to soften it up even more; then back the tip up until it is just under the skin of the plastic. This way the hook jumps out easily when setting the hook. Use 4 or 6" line for best results and use a head weight as light as conditions will allow. A very light, 1/32oz head, will let the lure be more buoyant and crawl over underwater limbs more easily. Heavier heads can be used when fish are active and conditions may be windy.

## Improper Rigging

This is improper rigging. The hook is exposed and will hang easily unless in open water. The gub needs to be slid up so the hook tip is buried just beneath the surface of the plastic grub. Check often to make sure the grub is rigged properly. Blue Gill and Perch bites will sometimes pull the grub down, so dress it back when necessary.

## Typical Riggings
