

AIR ROTOR DESIGN

The Air Rotor weighs up to 15% less than ordinary rotor designs. Its unique shape reduces unnecessary weight while distributing stress more evenly throughout the rotor for maximum strength.

LT CONCEPT

Now with a smaller and more compact frame, the LT family of reels utilize a small, lightweight frame with a larger DigiGear for the perfect combination of Light and Tough.

DIGIGEAR

The all new DigiGear is precision machined cut and polished. This offers maximum efficiency with a better transfer of energy and unmatched smoothness.

Rely on premium fishing gear & accessories by Daiwa if you're looking for quality and efficiency.
