

Flounder Gigging Lights

Flounder gigging at night no longer requires an expensive generator to provide adequate lighting to locate those elusive flounder. With the development of high efficient and high output LEDs it is easy to patrol the shallow coastal lagoons and beaches in total silence, and, with enough light to do the job. Hydro Glow FL30 series is the light for you.

Common installations consist of mounting multiple lights, usually 4 to 8 lights, around the bow of the boat. Many "giggers" build a platform across the bow of the boat making it easy to move around and spot the flounder in the shallows. With this setup the battery can be placed under the platform out of the way. With a good quality marine battery you can easily run 4 FL30 floodlights on a single battery for 6-8 hours.

Bow Hunting Lights

Bow Fishing at night no longer requires an expensive generator to provide adequate lighting to locate those elusive flounder. With the development of high efficient and high output LEDs it is easy to patrol the shallow coastal lagoons and beaches in total silence, and, with enough light to do the job. The BF30 is 12vdc and daylight color.

Looking for dependable marine lighting? Rely on Hydro Glow for quality and long-lasting products.
