

LOUD AND CLEAR

You've never heard this combination of volume and clarity before! These oversized nine and 11-inch, horn-loaded tower systems use a proprietary-compression horn design, custom made to sound incredibly loud and smooth. Whether you're in the boat, at the party cove or on the water, you've got the best sounding boat!

DURABLE

KICKER gear is made for marine. Injection-molded woofer cones are made of UV-treated polypropylene with Santoprene® surrounds, providing excellent durability in any weather. Even our enclosures are next level, integrating a UV-resistant inhibitor to prevent fading or discoloring over years of use. All of our HLCD speakers meet or exceed ASTM standards for humidity* and UV exposure** and come with mounting hardware forged from rustproof, 316L stainless-steel.

*ASTM B117 200 hr. Salt Fog Test

**ASTM G154 400 hr. Accelerated UV Test

MOVE IT

KICKER engineered a revolutionary new way to mount your KMTC. Made from stainless steel and thick ABS, the locking cam/toggle system works with a 359° swiveling design, allowing easy rotation of the speaker without tools!

SIMPLE. SECURE.

When the cruise is over, KICKER's new mating socket makes speaker removal incredibly easy. With a single Allen wrench, the through-clamp wiring system easily disconnects from the bracket - without removing a single wire.

LIGHT IT UP

Light up the night! Seven vibrant LED colors let you match the speakers to your boat's theme, or upgrade to 20 colors and 19 lighting modes with the optional KMLC Controller and wireless remote (sold separately).
