

Next Level Knob

Witness a revolutionary wireless remote that goes way beyond a simple bass knob. Control as many as four KXM Mono amplifiers simultaneously, plus the bass channel of the five-channel amplifier. Monitor and adjust vital functions of the amp including clipping, gain, bass boost and more.

Power Pack

These Class D amplifiers deliver as much as 1,200 watts – while requiring an incredibly small footprint.

Tuned In

No matter where you mount your KXM amp, this easily accessible 24dB crossover lets you quickly tune your system to perfection. To get the most out of your bass, a variable 24dB subsonic filter is featured on mono and five-channel amps.

SHOCwave™ Reveals the Bass

The SHOCwave™ Bass Restoration processor reveals the depth and power hidden in your digital recordings. This advanced processor is built into mono and five-channel KXM amplifiers, and easily controlled with the wireless KXARC remote (included).

Made for the Water

All power terminals meet stringent ABYC/NMMA standards, while thick gasketing protects the control cover from unwanted moisture. Even the aluminum chassis is UV treated for extra-long life. All KICKER marine amplifiers also utilize conformal coated circuit boards to protect the heart of the amp from water damage.

Craft Your Sound

Big power comes with big control. An adjustable 24dB crossover is featured on our marine amplifiers, as does 18dB of KicEQ+™ bass boost for that extra bump.

Illuminating Knob

Get the absolute most out of your amp with a specially designed gain control that lights up when the perfect input signal is detected from your radio.
