INSTALLATION/WIRING INSTRUCTIONS

For Marinco ConnectPro 6 Gauge Receptacle Adapter

WARNING: Batteries contain a large amount of potential electrical energy. Extreme care must be used when working with batteries. An improper connection to a battery can release enough energy to cause severe injury or fire.

PLEASE READ THROUGH ALL INSTRUCTIONS PRIOR TO INSTALLATION The following precautions must be taken:

- The wiring to the battery must have proper overcurrent protection in the form of a fuse or circuit breaker. Position the overcurrent protection within 7" of the battery.
- Follow the wiring diagrams exactly.

6 Gauge Receptacle Adapter Installation And Wiring

- 1. Strip the battery wires 1/2". If necessary, cut back the wires until clean wire is uncovered. Do NOT solder the ends of the wires. Insert the negative wire into terminal 1 and the positive wire into terminal 2 (see Figures 1, 2 and 3). For three-wire systems (either 12/24 or 24/36V) insert the highest voltage wire into terminal 3 (see Figure 4).
- 2. Make certain there is no wire insulation inside the terminals, and there are no stray wire strands outside the terminals. Tighten the terminal screws to 18-20 in-lbs torque. Do not overtighten.
- 3. Install the adapter to receptacle. Make certain adapter terminals marked "1," "2," and "3" match the corresponding receptacle terminals marked "1," "2," and "3" on the receptacle.
- 4. Tighten the receptacle terminal screws to 12 in-lbs torque. Do not overtighten.
