

Manual

RESCUE STICK™ MRD100 THROWABLE EMERGENCY RESCUE INFLATABLE

READ AND UNDERSTAND OWNER'S MANUAL BEFORE USING THIS DEVICE

Failure to follow user Instructions could result in death or serious injury.

Refer to them frequently for continuing safe operation and to instruct other users.

If you pass this device to someone; include these instructions as well.

US Patents 7,004,807 and 7,128, 629

SYMBOLS

Symbol	Signal	Meaning	FIGURE 1
	WARNING:	Indicates a potentially hazardous situation, which, if not avoided, could result in death or serious injury.	
	CAUTION:	Indicates a potentially hazardous situation, which, if not avoided, could result in minor or moderate injury.	
	READ AND UNDERSTAND INSTRUCTION MANUAL:	Indicates that failure to read and understand the user manual could result in death or serious injury.	
	WARNING:	Indicates a potentially hazardous situation, which, if not avoided, could result in death or serious injury. CO ₂ cylinders are under extreme pressure. Use caution when handling them. When servicing, wear protective eye wear.	

DO NOT REMOVE PRIOR TO SALE.

INTRODUCTION

Congratulations on your purchase of the Mustang Survival Rescue Stick™, which provides rapid flotation assistance to a person at risk of drowning. Simply remove the baton shaped Rescue Stick™ from its protective container and throw near the victim. Once contact is made with the water, it inflates in seconds to a large horseshoe shape, providing 30lbs of buoyancy, keeping a person afloat and their head above water until help arrives.

WARNING: Do not attempt to use or service this product until you read and completely understand the owner's manual. Only a qualified service technician should perform service or repairs, other than those found in this manual.

The Rescue Stick™ is a portable water rescue flotation device that you throw to provide emergency flotation to a conscious victim. When the Rescue Stick™ is thrown into the water, it automatically inflates into a flotation device.

Measuring only 14" in length and weighing less than 1 lb, the Rescue Stick™ is the most compact water rescue tool available. Easily stowed in a boat, vehicle, backpack or by the pool so that it will be accessible when and where you need it.

General Safety Rules

WARNING: Read and understand all instructions. Failure to follow all instructions listed below and throughout this user manual may result in improper use and/or damage to the device making it unusable or result in death or serious personal injury.

Know Your Rescue Stick™

Read the user manual carefully. Learn the device applications and limitations as well as the specific potential hazards related to this device. This device uses CO₂ gas, within the handle cartridge, to inflate the flotation device. Read and understand the handling and care of CO₂ cylinders.

Protect Your Rescue Stick™

Store the Rescue Stick™ in its original storage container in a clean dry area. Keep this device away from fuels, oils, acids and from sharp or pointed objects.

Keep Away From Heat and Moisture

Avoid prolonged exposure to excessive humidity or high temperatures in excess of 140° F or 60°C.

Inspect Device Periodically

If damaged, do not use.

Keep Up Routine Maintenance

Replace bobbin every three (3) years (normal use) or once a year (commercial use).

Dispose of Gas Cylinders Only When Empty

SPECIFIC SAFETY RULES

WARNING: CO₂ cylinders are under EXTREMELY high pressure. A puncture or release of freezing liquid CO₂ (-50°F) could result in serious injury or death. CO₂ cylinders and cartridges should be handled with extreme care by responsible adults. Installing a faulty or spent cylinder will result in the failure of the Rescue Stick™ to operate and inflate the flotation device.

NEVER throw the Rescue Stick™ directly at the victim in the water. Throw to an area **NEAR** the victim.

Inspect the new cylinder and make sure it has no holes or scratches on the face or rough threads. **ALWAYS** wear eye protection when changing CO₂ cylinders.

CAUTION: This device is water actuated. Trapping moisture inside the storage container could cause premature inflation. Excessive heat coupled with trapped moisture may accelerate this condition. Ensure that all of the components and the container of your device are clean and **COMPLETELY DRY** before re-arming and/or returning the device to its storage container.

WARNING: Usage Below Freezing - prolonged exposure to extreme cold may cause slow or inadequate inflation of the device. Under those conditions the rescue stick should be orally inflated after CO₂ inflation to achieve maximum buoyancy. Do not use the Rescue Stick™ when it has been exposed to temperature below freezing for a long duration.

Stow Cool

Do not heat the device or CO₂ cylinders over 140°F or 60°C. DO NOT incinerate or leave in confined spaces with direct sunlight such as a car dashboard.

Keep Away From Children

INSPECTION, STORAGE AND MAINTENANCE

READINESS CHECKLIST

- Inspect inflation assembly and cell on a clean, dry, flat surface. If any obvious defects such as: cracks, breaks, punctures or cuts are observed, STOP do not use this device. Factory inspection and validation is recommended.
- The green band inside the clear cap of the inflation mechanism should be clearly visible. If band is red, STOP do not use this device until a new handle cartridge and bobbin have been installed. Ensure the cylinder has not been pierced. See RE-ARMING instructions.
- Manual actuation lever should be in the upright closed position with green indicator clip locked in place.

- The inflation cell should be clean, completely dry and fully deflated. The oral tube should be capped in the sealed position, not in the inverted deflate position.
- Pressure check: Inflate the flotation cell through the oral tube until the cell is very firm to the touch. Leave undisturbed in a clean, dry area for 24 hours. There should be no significant loss of pressure after 24 hours.

NOTE: If cell or oral tube is not holding pressure, factory inspection is recommended.

STORAGE

Store the Rescue Stick™ in its original storage container in a clean dry area. Avoid prolonged exposure to excessive humidity or high temperatures in excess of 140° F or (60° C). Keep this device away from fuels, oils, and acids and from sharp or pointed objects. Replace bobbin every three (3) years (normal use) or once a year (commercial use).

With proper care and storage, this device's water sensing element has an approximate shelf life of three years. Your Rescue Stick™ can be re-armed. After expiration, use re-arm kit MA7206 and follow RE-ARMING and REPACKING instructions.

WARNING: Failure to inspect, service and maintain your Rescue Stick™ could make it less effective and/or damage the device making it unusable. A poorly maintained Rescue Stick™ could result in serious personal injury and a lost opportunity to save a life.

Take care of your Rescue Stick™; someone is counting on it.

OPERATION

In a water rescue situation, time is against you. The Rescue Stick™ is a quick and simple emergency flotation device to be used when a conscious victim is in the water. This device can be thrown, near a conscious victim who requires temporary flotation until further rescue efforts begin.

INSTRUCTIONS FOR USE

Step 1 - Throw the device in area near the victim.

Step 2 - The device automatically inflates when immersed in water.

Step 3 - The device can also be manually inflated by pulling "jerk to inflate" tab.

WARNING: Unless you are a water rescue professional, entering the water to rescue a person can be a fatal mistake. Water conditions and the desperate acts of a victim can easily make you a victim as well.

REACH, THROW, ROW; BUT DON'T GO.

Reach someone in the water with a pole, branch, paddle, ladder and many other things. Throw them anything that floats, such as a ball, milk jugs, ice chest, inner tube, PFD or Rescue Stick™.

RE-ARMING AND REPACKING

WARNING: CO₂ cylinders are under EXTREMELY high pressure. Puncture or accidental release could result in serious injury or death. CO₂ cylinders should be handled with extreme care by responsible adults. Installing a faulty or spent cylinder will result in the failure of this device to inflate. Inspect the new cylinder to ensure it has no holes or scratches on the face or rough threads.

WARNING: To properly RE-ARM AND REPACK this device, you must understand and follow the sequences and steps provided.

DRYING AND DEFLATING YOUR DEVICE

Step 1 - Allow storage container to completely dry out.

Step 2 - Hang inflated cell up by one of its handles inside a warm, dry and clean area to completely dry out. An inflated cell dries more thoroughly. Keep away from excessive heat or open flame.

Step 3 - To deflate the dry cell: remove cap on oral tube, invert cap and use inverted cap to depress the internal Pressure Relief Valve (PRV) located at the end of the oral tube. Hug and collapse the cell while depressing the pressure release valve. Continue to collapse the cell onto itself until virtually all the air is evacuated (Fig. 4).

Step 4 - Lay the cell down flat on a clean dry table, printed side up and the open end facing you (Fig.7).

Step 5 - Starting from the left cell leg, tightly roll up the cell in the clockwise direction until you reach the oral tube (Fig. 5). Tip: wrap cell around detached handle and roll to aid in deflation.

Step 6 - Evacuate any air remaining in cell (Fig. 6).

Step 7 - Follow the RE-ARMING and REPACKING instructions.

DISASSEMBLY

If your device has been inflated, the inflation cell must be inspected (see INSPECTION, STORAGE AND MAINTENANCE), completely deflated, clean and COMPLETELY DRY before re-arming and repacking.

Step 1 - Unpack, or open, the Rescue Stick™ assembly on a clean, flat, and dry surface so that the inflater is visible (Fig. 7).

Step 2 - Remove the handle, containing the discharged CO₂ cylinder, by firmly rotating counter-clockwise (Fig. 8). To ensure that you do not re-install a used cylinder, discard immediately. If cylinder is discharged, replace with new handle. Ensure the cylinder has not been pierced. See RE-ARMING.

Step 3 - Remove clear inflator cap by turning counter-clockwise (Fig. 9).

Step 4 - Remove the bobbin from the cap. Discard the bobbin. Check the housing to be sure it is clear of debris, clean and dry (Fig. 10).

CAUTION: The bobbin body may remain in the housing or in the cap assembly when you remove the cap. The bobbin body must be removed prior to assembly.

RE-ARMING

WARNING: CO₂ cylinders are under **EXTREMELY** high pressure. Failure to install a bobbin prior to the installation of the CO₂ cylinder could result in a premature puncture of the CO₂ cylinder. CO₂ cylinders contain freezing liquid CO₂ at -50°F which could cause serious skin burns and eye injury. A punctured unrestrained CO₂ cylinder can travel at high velocities which could cause serious injury or death.

WARNING: In order to properly re-arm the device, steps 1 - 4 must be followed exactly.

IMPORTANT: Bobbin must be installed into the inflator **HOUSING** before screwing on the inflator cap.

IMPORTANT: Check the date on the bobbin in the re-arm kit. The date should not be more than three (3) years previous to today's date. If more than three (3) years, **DO NOT USE** and discard the expired bobbin.

Step 1 - To install a valid bobbin, align the slots on the bobbin with those on the housing. The bobbin will slide in easily if installed correctly (Fig. 11).

Step 2 - Install cap by screwing clockwise until it meets the housing shoulder (Fig. 12).

NOTE: Ensure there is no gap between the cap and the inflator shoulder.

Step 3 - Install new handle (CO₂ cylinder) by rotating clockwise into inflator until firmly secured (Fig. 13). Ensure the cylinder has not been pierced.

Step 4 - Check to be sure service indicator is green inside clear cap and the green indicator clip is firmly attached to the activation lever (Fig. 14).

REPACKING

Step 1 - Lay flat on clean dry surface, handle side up (Fig. 15).

Step 2 - Fold the left cell lobe **under** the right cell lobe at the FOLD#1 line (Fig. 16). Ensure the "Jerk to Inflate" tab is placed beside the cell.

Step 3 - With your left hand, fold the J end over to form the letter I at the FOLD#2 line (Fig. 17).

Step 4 - Fold the cell, at the FOLD#3 line, down to the inflator and hold down with your right hand (Fig. 18).

Step 5 - With your left hand, fold the bottom of the cell over the handle, at the FOLD#4 line. Ensure "Jerk to Inflate" tab is placed beside the cell (Fig. 19).

Step 6 - Tightly roll up the cell starting from the handle end and rolling forward. Ensure "Jerk to Inflate" tab is outside cell when rolling up (Fig. 20).

Step 7 - Place the handle through the cover loop. Place the rolled cell into cover and close the cover by fastening the Velcro strips. Ensure "Jerk to Inflate" tab is outside the cover and accessible (Fig. 21).

Step 8 - Cover tether should be made snug to the handle. Before returning the device to its storage container, ensure that the container is clean and completely dry (Fig. 22).

Step 9 - Ensure "Jerk to Inflate" tab is outside the cover and on the same side as the Velcro opening. (Fig. 22).

TRAINING

Anyone who can throw a stick can throw the Rescue Stick™ to someone in distress in the water. On average the Rescue Stick™ can be thrown between 100 and 150 feet – almost triple the distance of a typical rope bag or life ring. The inflated horseshoe will float with the person in the water. Regular training will improve throwing accuracy and victim survival rates.

Practise throwing the Rescue Training Stick MRD050 to either dry land or in-water targets of varied distances. Remember to aim near the target (or victim) for maximum effectiveness. Repeat exercise until confident with the Rescue Stick™. You can order the MRD050 Training Stick through our customer service department. More information and suggestions on how to organize a training session or throwing competition can be found on our web site.

WARNING: To avoid damage, don't use your Rescue Stick™ for dry land training. Always re-arm your Rescue Stick™ after inflation.

ACCESSORIES

Part Description	Part number
Re-arm kit	MA7206
Rescue training stick	MRD050

WARNING: If you need to return or ship your Rescue Stick™, notify carrier when shipping CO₂ cylinders or devices that contain CO₂ cylinders. Packages containing CO₂ cylinders are a shipping hazard. CO₂ cylinders have shipping restrictions, require special marking and must be shipped using ground transportation only.
