

**T-5 ELECTRO STEER
55-0502 FRESHWATER
55-0503 SALTWATER**

Similar to our T-4, the T-5 is designed to provide steering for a kicker motor on boats where transom space is limited. Only 4" of space is needed between your main motor and kicker.

Installs easily on any kicker motor that has a threaded tilt-tube, and there is no need to drill holes in your transom.

The drive unit has a rugged internal motor that steers the kicker through the use of a remote tethered to a 24 foot cable. Simply push one of the directional buttons and the T-5 will immediately respond, moving your kicker incrementally for precision control. For a dramatic move, hold down the button to quickly move your kicker from full right to left in seconds to swiftly and safely make a hard turn.

The drive unit and remote are powered by your boat's 12 volt battery.

The 55-0502 [freshwater version] has black Delrin housing, and is water resistant.

The 55-0503 [saltwater version] has white Delrin housing, is water resistant, and comes with stainless mounting hardware.

You just need basic tools and about an hour to install the T-5. All mounting hardware is included.

Weight: 9 lbs

Drive Unit
Housing Dimensions: 12" x 4.5"

For the ultimate in control, consider adding the TrollMaster PRO3 Plus. This will allow you to wirelessly control your steering AND your speed as well. The wireless fob shown here will easily fit in a pocket or can be worn on a lanyard around your neck.
