Aim in the Right Direction

Airmar has taken our innovative Tilted Element™ technology to a higher power. The 1kW, B164 transducer is perfect for fast, trailered, tournament, sportfishing vessels that cannot install a thru-hull with a High-Performance Fairing. The low-profile bronze housing protrudes less than 6.35 mm (0.25") outside your hull, which results in excellent performance at speeds up to 30 knots (34 MPH).

Fine Tune Your Fishing

The ceramic arrays are tilted inside the housing giving you a perfect vertical beam with maximum energy on what is directly below your boat. Take your fishfinder to the next power with Airmar's 1kW Tilted Element Transducers.

Stainless steel housing—SS164

The ceramic elements are tilted inside the housing, which compensates for your boat's deadrise. This aims the beam straight toward the bottom, resulting in stronger echo returns and more accurate depth readings.
