## CUSTOM BUILT RECEIVER HITCHES

REESE Towpower® begins with Computer Aided Design (CAD) matched to manufacturer and model year for a perfect fit and top towing performance. REESE Towpower® combines this with solid, all-welded construction for maximum performance and safety under the toughest conditions. The E-Coat base with black powder coat finish keeps your hitch looking good and resists corrosion for many years of service.

- Limited lifetime warranty
- See application guide on page A-11 for additional information
- New applications are engineering and released throughout the year

When choosing a REESE Towpower® trailer hitch consider the following questions to keep in mind:

- How much combined weight (trailer and payload) will I need to carry?
- Is my truck or automobile rated to carry the combined weight I am considering?
- What style(s) will fit my vehicle?
- Which designs are engineered specifically for my vehicle?
- Is appearance a major consideration; what will the installed trailer hitch look like?
- How easy will it be to install on my vehicle?
- Will any vehicle modifications be necessary?

#### 1). VEHICLE MODEL/STYLE & YEAR RANGE

Applications are separated first by make, and subsequently by model and yearly divisions.

#### 2). HITCH FOOTNOTES

Footnotes reference additional information pertinent to the installation and availability of a particular hitch. Common footnotes such as GP (hitch cross-tube concealed behind bumper) are listed at the bottom of each left hand page.

#### 3). REESE® TOWPOWER HITCH PART NUMBERS

Class I, II, III, IV and V receiver hitches are specific for each individual vehicle. This listing indicates the correct hitch by application.

#### 4). RECEIVER TYPE

Receiver Type codes are referenced in a Receiver Type footnote box at the bottom of each right hand page.

#### 5). NO DRILL

Ø - No drilling requires.

#### 6). RECEIVER SIZE

Receiver sizes range from 1-1/4 in. to 3 in.

#### 7). RECEIVER WEIGHT RATINGS

WC or Weight Carrying, refers to the total load the hitch is capable of pulling, without the use of a weight distributing system. WD or Weight Distributing, is the total load capacity of the hitch when a weight distribution system is properly utilized.

#### 8). INSTALLATION TIME

Average installation times (IN) are listed in minutes and are published for all hitches and T-One® wiring connectors. Times are based on common mechanical practices and should be used as an estimate as actual installation times may vary in each individual situation.

#### 9). T-CONNECTOR PART NUMBERS

T-Connector part numbers are for vehicle specific applications.

#### 10). ELECTRICAL FOOTNOTES

Footnotes reference additional information pertinent to the installation and availability of a particular electrical harness. Footnotes are listed at the bottom of each right hand page.

# HITCH ACCESSORIES

No towing system is complete without the right hitch ball mount. REESE® Towpower is fundamentally changing the approach to ball mounts with an innovative and patent pending line of products. REESE® Towpower manufactures many different ball mounts, so you can choose the right fit, based on your vehicle type, towing capacity, trailer and load size, along with the height of your hitch. Each trailer hitch ball mount is dipped in a zinc-phosphate based coating for maximum protection against rust and corrosion, even in the most "hard to fill" places. Then it is coated again with a powder coat for two layers of superior protection.

HITCH BALLS

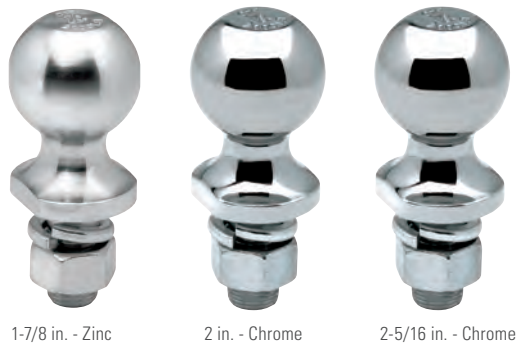

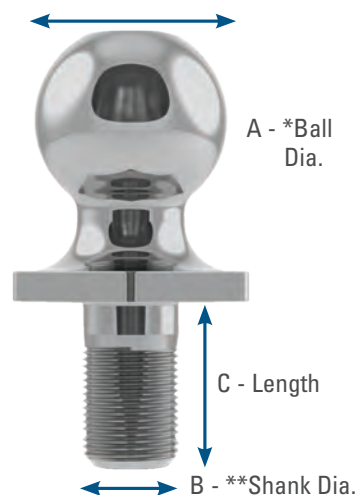

**SELECTING THE RIGHT HITCH BALL:**

1. Always use the properly-rated hitch ball for your towing system
2. Your towing system's maximum weight rating is always equal to the lowest rated item in the system
3. Your hitching system cannot be upgraded to a rating higher than the maximum rating of your hitch

For example, a 3,500 lbs. ball on a 2,000 lbs. max trailer weight-rated hitch does not increase your towing capacity to 3,500 lbs. Your hitching system is still rated at 2,000 lbs.

- Conversely, a 2,000 lbs. ball on a 3,500 lbs. max trailer weight-rated hitch decreases your maximum towing capacity to 2,000 lbs
- The hitch ball diameter (A) must be the same diameter as the trailer coupler (1-7/8, 2 or 2-5/16 in.)
- The shank diameter (B) of the hitch ball should be the same as the hole diameter in the ball mount
- The shank length (C) should be long enough to allow at least two threads to be visible when the hitch ball is installed and the nut completely tightened

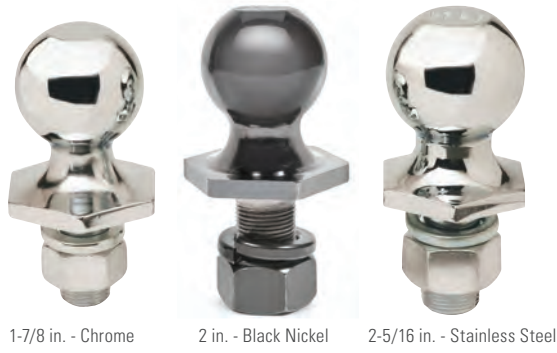

\*The ball diameter required is stamped into the coupler handle or body  
 \*\*During hitch ball installation, torque all 3/4 in. shank diameter balls to 160 ft. lbs., and 1 in. shank diameter balls to 250 ft. lbs., and 1-1/4 in. shank diameter balls to 450 ft. lbs.

**STANDARD HITCH BALLS**

- Solid steel hitch balls engineered to meet all safety requirements of SAE J684
- Forged for superior strength
- Chrome or zinc finish for corrosion prevention and lasting good looks
- When installing hitch balls, torque all 3/4 in. shank diameter balls to 160 ft. lbs.  
 all 1 in. shank diameter balls to 250 ft. lbs.  
 all 1-1/4 in. shank diameter balls to 450 ft. lbs.

**CLASS I/II BALL MOUNTS**

**BALL MOUNTS**

There is a REESE Towpower® ball mount for just about every application. Choose from Class I- Class V conventional ball mounts with rise or drop styles and multiple lengths to meet your hitching needs. 1. Measure from the ground to the top of the hitch
2. Measure from the ground to the (inside) top of the trailer coupler (when level)  
(The difference in the two measurements is the amount of ball mount 'rise' or 'drop' required)
3. Subtract the height of the hitch ball (most are 2-1/2 in. - 3 in. high) from coupler measurement  
(The difference in the two measurements is the amount of ball mount 'rise' or 'drop' required)

# ELECTRICAL WIRING

Trailers require electrical hook-ups that make towing safer for you and others on the road. In fact, while each state has its own laws and regulations governing everything from size limits to weight restrictions, the one thing they all have in common is that your trailer must be wired for tail lights, brake lights and turn signals. This is accomplished by connecting your trailer to your vehicle's electric system.

Unfortunately, not all trailer electrical wiring is compatible with the wires of your car, truck, van or SUV. Fortunately, REESE® Towpower manufactures a full line of trailer electrical components for everything you need to get your trailer lights up and running for safe towing. We manufacture T-Connectors, wiring converters, wiring connectors, adapters, brake controls and more to make towing safe for you and the drivers around you. Best of all, our products install quickly and easily with simple do-it-yourself instructions.

1. Locate wiring position, see chart on page A-81

2. Unplug the tail light harness.

3. Route T-Connector to the tail light harness.

4. Plug the tail light into the T-Connector.

5. Re-secure the tail light and you're ready to tow!

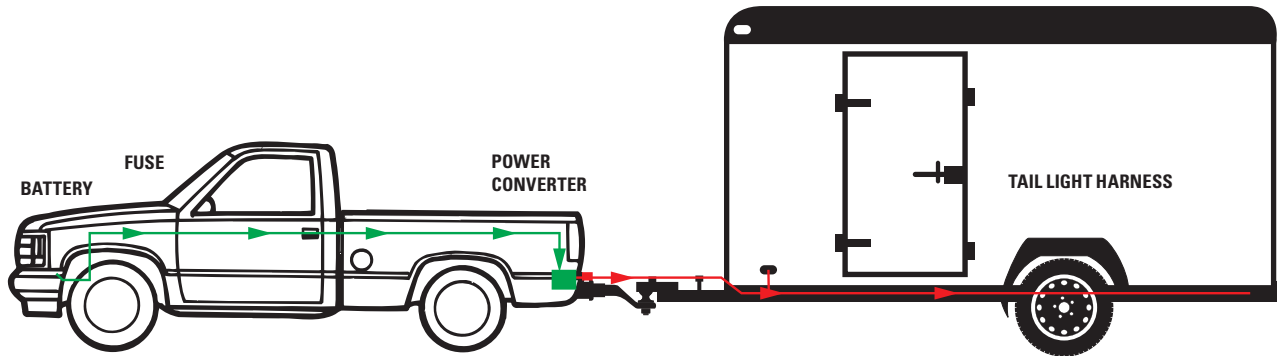

NOTE: Some vehicles may require grounding and/or direct connection to the battery.

## POWERED TAIL LIGHT CONVERTERS ELIMINATE THE DRAIN ON YOUR VEHICLE'S ELECTRICAL SYSTEM

**With a Power Module** the additional power required to supply the trailer lights (represented by the red line) is supplied directly from the battery. Only a small amount of power is required from the fuse panel, turn signal switch, tail light harness and lamp out sensor, to signal when to illuminate the trailer lights.

**Without a Power Module** all the additional power required to supply the trailer lights pass through the vehicle's electrical system.

### TRAILER LIGHT POWER MODULES

- Virtually eliminates additional electrical draw on the vehicle's tail light circuits
- Ensures maximum trailer light brightness
- Powers the trailer's stop, turn, tail and running lights without overloading vehicle electrical systems
- Compatible with:
  - 2-Wire and 3-Wire systems
  - Multiplex
  - PWM
  - LED tail lights

### IDENTIFYING THE NEED FOR CONVERTER

- Today's vehicles have light gauge wire
- Computerized vehicle sensors monitor electrical current draw
- Without ModuLite® the sensors may give false readings
- Adding additional towing lights without converter may overload the system
- System problems and failure may occur without converter

### HOW IT WORKS

- Converter connects directly to vehicle's battery and powers the towing lights
- Converter provides from 2.1 to 16 amps of power per circuit to the trailer lights, depending on the unit

### INSTALLATION

Converter power modules typically install in 30 to 45 minutes depending on the ease of routing the power supply wire from the battery to the rear of the vehicle.

### WHEN YOU NEED CONVERTER

- Trailer has more than one light assembly per side and is equipped with multiple clearance or running lights
- If the tow vehicle may tow a variety of different trailers
- Vehicle is equipped with lamp out sensors or other electronic devices that could be damaged by voltage fluctuations
- Owners manuals caution against adding additional loads to electrical circuits

# TRAILER LIGHTING

Since 1931, REESE® Towpower has served as a trusted partner to commercial truck and light-duty trailer manufacturers and their respective aftermarkets. We manufacture incandescent and LED trailer lighting products that provide an extensive variety of lighting options for agricultural, industrial, recreational, and utility trailers.

While each state has its own set of towing laws and regulations from size limits to weight restrictions, the one thing they all have in common is that your trailer must be wired for tail lights, brake lights and turn signals. REESE® Towpower manufactures every type of lighting you need to tow safely: stop/turn/tail lights, clearance lights, utility and back-up lights, reflectors, lighted hitch covers, tailgate lights and license plate lights. And rest assured that all of our lighting products comply with Department of Transportation requirements.
