

Robline

World Class Yachting Ropes

Core Braiding Technology

STS Ocean 5000 Core

Fibre: Dyneema, heat stretched, 12-strand

This core technology is a must for all high performance applications such as backstays and halyards aboard race yachts. Developed by the experts at Robline, a special heat stretch process, which includes a defined cooldown phase after the heating process, lends this rope its defined structure. This makes it possible to achieve an enormous increase in breaking strength coupled with minimal elongation (less than 0.5 % at working load).

Ocean 7000 Core

Fibre: Dyneema® SK99 **Braiding:** 12-strand

This core lends itself ideally to applications with high breaking loads, and at the same time for all those applications that require a product that is easy to splice. Typical uses are those where it is necessary to expand the attributes of Ocean 3000 XG.

Ocean 3000 XG Core

Fibre: Dyneema® SK78 **Braiding:** 12-strand

This high-performance fibre is the basis for various applications in sailing. For strains of up to 20% of the breaking load, a stretch of roughly just 1% can be achieved. XG stands for Next Generation, which refers to Robline's enhanced coating for this fibre. It provides good UV stability and improves the fibre's resistance to abrasion.

Globe Core

Fibre: Dyneema® coated **Braiding:** 12-strand

This core helps to make the transition to the top tier a little easier. The first pure Dyneema® core already offers more than enough for most cruiser racers. Thanks to a special coating this rope can be stripped and adapted to a particular set of circumstances, just like with the Grand Prix cordage.

Sirius High Performance Core

Fibre: Dyneema® & XLF **Braiding:** 16-strand

This core developed by Robline spans the performance gap between Performance and Cruising. The advantages from the Performance sector brought by the Dyneema® portion are paired with a price-performance ratio that was otherwise only be possible by choosing polyester products.

Sirius Performance Core

Fibre: Polyester **Braiding:** 16-strand

Polyester - the classic for Cruising sailors. This material owes its popularity to its UV resistance and relatively good breaking load and stretch values, combined with affordable fibre prices. The price-performance ratio of this fibre is unbeatable.

48 About TEUFELBERGER

49 Country Contacts

Robline has added another water sport

Originally the brand for sailing, we have now placed the kite line segment under the patronage of Robline. Our increased focus on this sport within the TEUFELBERGER Group and our passion for kiting have made this market an important segment within a few years.

We have recognized that the kite community's attitude towards life, which stands for freedom, adventure and community, fits in perfectly with our previously purely sailor-oriented Robline brand. Even more, our lines for kitesurfing enrich the sailing brand Robline and make it a hip water sports brand.

Robline Splicing Center

The Robline brand stands for “rigging” and “ready”, among other things. We take this assignment seriously. In the Robline Splicing Center we design your individual, exciting boat world with our rigging service. The result is perfectly assembled cordage. With hand-spliced, ready-made mooring lines and anchor lines, you are safe on the high seas and in port.

This is what every sailor has been dreaming of!

- ▶ All the cordage you need, and nothing more!
- ▶ Cordage custom-configured with suitable terminations!
- ▶ Tapered and spliced to your needs!
- ▶ You are just a few days away from your individual cordage!

These configurations are made for you at the Robline Splicing Center:

- ▶ Cutting to length
- ▶ Termination whipping at rope end
- ▶ Eye splice for braided ropes
- ▶ Eye splice for laid ropes
- ▶ Splicing in of a thimble
- ▶ Eye splice for hollow braid
- ▶ Eye splice for cruising or mooring line
- ▶ Eye splice for performance line
- ▶ Endless splice for cruising line
- ▶ Endless splice for performance line
- ▶ Tapered splice
- ▶ Flemish eye
- ▶ Splicing on of Dyneema® Cover
- ▶ Splicing in of soft shackles
- ▶ Fitting of a protective cover

Grand Prix

The Grand Prix product line from Robline is made up of ropes tested and optimized in race conditions. These rope constructions were employed with success on TP52, M32, GC32, Club Swan 50 and other Grand Prix yachts. They come in diameters from 7.5 mm on up, have a cover made of 100% PBO, and are perfectly suited as gennaker sheets. The highest performing among those lines feature breaking loads of up to 45 tons and are used as genoa sheets for megayachts.

We use three different types of core, each surrounded by braided covers optimized for the respective diameters and types of use.

Thanks to our one-of-a-kind STS Stronger than Steel® technology, we are able to produce ropes featuring exceptionally low stretch for the required diameters. This allows Grand Prix sailors to keep the diameter and consequently the wind resistance and the top weight low. Even so, sailors still get better responsiveness and optimum implementation of the trim.

Gennaker-Sheet

This line has been optimized for ceramic-coated winch drums.

Cruising

Sirius XTS

The Sirius XTS has been specially developed for the commonly used Spinlock® XTS clutch and aims to improve the holding power without locking earlier than desired. Also suitable as a sheet for very aggressive winches. The hybrid fibre core moreover minimizes stretch.

Sirius 1000

This rope closes the performance gap between the High Tech Performance and the previous Cruising products. Sirius 1000 combines several advantages of the Performance range products with a price/performance ratio known only from polyester products. Furthermore, it achieves optimal elongation values at the typical working loads that ropes are exposed to on Performance Cruising yachts.

High-Tech Shock Cord

A newly developed product, which is extremely resistant to abrasion thanks to the new high-tech fibre, and at the same time prevents the elastic core from being overstretched. This elastic rope is an indispensable product for modern skiff and catamaran classes.

Tapered Sheets

The range of "machine-tapered lines" of the Robline brand features exceptional characteristics. These include ultimate abrasion strength, minimal elongation, great handling comfort, and an attractive appearance. This is made possible by the use of premium quality raw materials from select suppliers.

Flat Mooring

The key feature of this newly developed mooring rope is its novel cover design. Flat Mooring distributes the frictional energy to a larger area while being soft and easy to handle. These characteristics make it an ideal mooring rope for tricky and choppy berthing situations.

Ready-Made-Products

Ready-made-Products make your life easier. Ready for use and self-explanatory, they do not require any additional, time-consuming customization. Pioneers in this segment, Robline Ready-Made-Products excel, just like the rest of our vast product portfolio, through their high quality and impeccable workmanship.

Product benefits:

- ▶ Ready for use
- ▶ Self-explanatory
- ▶ Require no additional time-consuming customization
- ▶ No short lengths

Bonifacio Winch

Anchoring without a bow roller – innovation at its finest. Developed for use with anchor winches, Bonifacio Winch features a leaden core that runs along the entire length of the rope. This design permits horizontal dragging of the anchor, enhances its retention power, and also dampens the boat's movements. The spliced-in stainless-steel thimble permits quick fastening of the anchor. Delivered in a practical storage bucket, it is easy to stow aboard your vessel. When making Bonifacio Winch, great importance was attached to the use of premium quality materials for both cover and intermediate cover. PES fibers keep the Polyurethane-coated core from slipping out. This way, the rope is protected against corrosion, and the environment is protected, as well.

Poseidon

Leaded anchor rope meeting highest demands. In the case of Poseidon, lead inserts are integrated into the core over one quarter of its total length, which makes it easier to drag the anchor horizontally and enhances its retention power. In addition, the rope becomes easier to lift. Poseidon is delivered in a bag with a spliced-in stainless steel thimble. A high quality PES cover made out of a 16-plait weave as well as an intermediate cover also consisting of PES keep the lead insert from slipping out from the rope. A polyurethane coating affords additional protection on the insert.

Wire Lock

Security without scratching and dents. Wire Lock's backbone is a 7 x 19 stainless steel wire around which a 32-plait PES cover is braided that prevents abrasion and protects the core from UV-radiation. The eyes are protected by a rubber sleeve.

Double Braided Classic

A traditional rope with a long life span. Based on the long standing and proven Sirius design, Double Braided Classic excels due to its ideal grip and high abrasion resistance. The 32-plait weave of this traditional line consists of a combination of polyester staple fibers and polyester multifilaments and ensures the product's long service life.

Classic-Tex

Made of XLF, Classic-Tex looks like a traditional rope, but behaves like a state-of-the-art yachting rope. Its benefits include a long service life, low stretch, and zero water absorption. Classic-Tex can be used as a sheet, in tackles, as a multi-purpose rope, and for decorative purposes.

Relationships

– we value not only the challenges that sailing presents, but also the community that has built up around water sports. With Robline we therefore support young and enthusiastic sailors and ambitious teams in every class.

Sailmakers

High-Tech Shock Cord

A newly developed product, which is extremely resistant to abrasion thanks to the new high-tech fibre, and at the same time prevents the elastic core from being overstretched. This elastic rope is an indispensable product for modern skiff and catamaran classes.

Responsible

– anybody who, like Robline, mixes it at the top with the elite also has a responsibility towards society and the environment. With Robline cordage, you can rest assured that we will make our contribution together.

GFL – Gennaker Furler Line

GFL is used mainly as luff line for gennaker and Code Zero sails and exhibits its qualities, especially its excellent torsional characteristics, also on large-sized yachts. Its compact 32-plait PES cover makes GFL resistant to abrasion and UV and prevents any core/cover slippage. For the core, we rely on a 12-plait Vectran® fiber for lowest stretch, and the additional impregnation provides protection against UV and abrasion.

Flying Lines 8-braid

Tarifa

The Tarifa line is a must for every kiter who is keen on value for money.

Product name	Ø mm	MBL daN	Spool m	Art no.	
Tarifa FL-340T	1.40	340	1,000	7154629	7154630

Tarifa minispools

Product name	Ø mm	MBL daN	Spool m	Art no.	
Tarifa FL-340T minispool*	1.40	340	60	7154462	7154464

*All minispools come in usable packaging consisting of 12 spools, sellable at the POS.

Garda

The Garda line is for true professionals. The 8-braid with Dyneema® SK99 is advanced in terms of elongation, breaking load and shrinking.

Product name	Ø mm	MBL daN	Spool m	Art no.	
Garda FL-299	1.10	290	1,000	7154621	7154622
Garda FL-389	1.40	380	1,000	7154623	7154624

Garda minispools

Product name	Ø mm	MBL daN	Spool m	Art no.	
Garda FL-299 minispool*	1.10	290	60	7154446	7154448
Garda FL-389 minispool*	1.40	380	60	7154452	7154450

*All minispools come in usable packaging consisting of 12 spools, sellable at the POS.

Flying Lines 12-braid

Capetown

This is the basic series among the 12-braid lines. Easy to splice but with high durability due to the Dyneema® SK78 fiber.

Product name	Ø mm	MBL daN	Spool m	Art no. red	grey
Capetown FL-400	1.70	400	1,000	7154631	7154632
Capetown FL-500	1.80	500	1,000	7154635	7154636
Capetown FL-610	2.20	610	1,000	7154637	7154638

Capetown minispools

Product name	Ø mm	MBL daN	Spool m	Art no. red	grey
Capetown FL-400 minispool*	1.70	400	60	7154468	7154466
Capetown FL-500 minispool*	1.80	500	30	7154470	7154472
Capetown FL-610 minispool*	2.20	610	30	7154474	7154476

*All minispools come in usable packaging consisting of 12 spools, sellable at the POS.

Maui

Maui lines are the true superstars among the kitenline assortment. Easy to splice due to 12-braid technology, with a high breaking load and low elongation due to the Dyneema® SK99 fiber. In comparison to Dyneema® SK78 products, a smaller diameter at same breaking load is possible without compromising on safety.

Product name	Ø mm	MBL daN	Spool m	Art no. red	grey
Maui FL-389	1.30	380	1,000	7154625	7154626
Maui FL-509	1.70	500	1,000	7154627	7154628

Maui minispools

Product name	Ø mm	MBL daN	Spool m	Art no. red	grey
Maui FL-389 minispool*	1.30	380	60	7154454	7154456
Maui FL-509 minispool*	1.70	500	30	7154458	7154460

*All minispools come in usable packaging consisting of 12 spools, sellable at the POS.

Line Types

Depower Line

This kind of line needs special braiding and coating technology in order to ensure maximum wear resistance. When it comes to coating technology, Single Yarn Impregnation (SY) can be distinguished from the normal impregnation procedure. With SY every single yarn is separately impregnated and therefore shows better resistance to abrasion. With normal impregnation, a special coating recipe is used.

Product name	Ø mm	MBL daN	Spool m	Art no.	grey-white	darkgrey
DPL-1600SY	4.80	1,600	200	7153582	-	-
DPL-2200	4.70	2,200	200	-	-	7153549

Leader Line

For this type of line an especially smooth coating was developed in order to avoid injuries in case of an encounter between the bar and the rider. In order to cater to the demands of a broader spectrum of users, a slightly thinner line with lower breaking load for non-professionals was developed as well as one with a higher breaking load to satisfy the standards of a pro-rider.

Product name	Ø mm	MBL daN	Spool m	Art no.	red	grey
OL-500	2.50	500	500	7151278	-	7150472
OL-965	2.70	965	500	7151232	-	7151231

Safety Line

Depending on the kite bar, safety lines can have different dimensions. Due to the Robline expertise, Ocean 3000 provides every bar safety mechanism place for its own line.

Product name	Ø mm	MBL daN	Spool m	Art no.	red	blue	grey
Ocean 3000	2.00	400	200	7153303	-	7153304	7153306

Note: Net and line need to be ordered separately

D-Splicer Needle

The preferred splicing tool of pros. Can be used for all types of braided ropes. Made of stainless steel and provided with a plastic handle.

Item	Item no.
F 10 (up to 2 mm)	U130151
F 15 (for 2-4 mm)	U130147

Dyneema® Scissors

Special scissors with microserration for high tech fibers.

Item no.: 7155379

Sail Ties

Sail Ties made of polyester

Length: 200 cm/78,7 inch Item no.: 7999967

Belt

140 cm long, cutting to length is easy with a heat-cutting device

Item no.: 7991040

Polo Shirt

High quality branded polo shirt with subtle ROBLINE embroidery.

Item	Art.Nr.
Polo Shirt white	7999941
Polo Shirt navyblue	7999935

Stickers

White or transparent background in various sizes. Suitable for any use on smooth surfaces.

Item	Art.Nr.
Sticker S white	7999946
Sticker M white	7999947
Sticker L white	7999948
Sticker XL white	7999949

Sticker M transparent	7158392
Sticker L transparent	7158391

Travel Bag

Its water-proof bottom and cover as well as its attractive appearance make this bag a handy companion on board.

Item no.: 7080229

Fiber Types

Overview

► Monofilaments

A few comparatively thick fibers (Ø 0.3mm) are fed in parallel to the braiding process.

Base materials in detail

► Dyneema®

The starting material for Dyneema® is polyethylene. It is modified at a molecular level and stretched in one direction. The stretched molecule chains increase breaking strength and decrease elongation. Therefore, Dyneema® exhibits the lowest elongation at break of all synthetic fibers. Dyneema® has very low specific gravity, which makes it buoyant. The only downside of this fiber is that it creeps. This means that the fiber will show permanent elongation under load. Dyneema® is used as a core material in high tech yachting ropes. The core bears the load, while the cover merely serves as a protection against abrasion and light. Therefore, it is certainly possible to remove the cover from the rope ends without reducing the rope's breaking strength. Dyneema® also exhibits good abrasion resistance and resistance to sunlight. Dyneema® is the most widely used high tech fiber in yachting ropes and can be used for a vast variety of high quality products such as sheets, halyards, and trim lines.

► Liquid crystal polymer (LCP)

Liquid crystal polymers (LCP's) are extremely complex, modified polyester chains. Vectran® is a brand name of Hoechst Celanese in the U.S. Vectran® is very expensive. Therefore, it is used only in high tech cordage. This product stands for low stretch combined with ultimate breaking strength. However, its UV resistance is not very high. Furthermore, LCP's exhibit very high temperature resistance and low vulnerability to bending across sharp edges. The big advantage of Vectran®, however, is the absence of creep. Vectran® is an absolute high tech fiber mainly designed for competition. Its low UV resistance makes using a cover indispensable, which must not be removed, not even for weight reduction purposes.

► Multifilaments

Many very thin fibers (0.001mm) are used as a bundle during the braiding process.

This is the most widely used kind of construction in yachting ropes.

► Textured fibers

The fibers are not arranged in parallel in the bundle but exhibit a more or less random type of arrangement. This is why the fiber bundle has a comparatively rough surface.

► Polybenzoxazole (PBO)

PBO is a high tech fiber. Produced by Toyobo in Japan, it combines extreme breaking strength, high temperature resistance, and very low elongation. Its weakness, however, is its low resistance to sunlight.

► Aramid/Technora®

Aramid fibers provide extremely high breaking strength combined with almost no elongation. They are sensitive to sunlight, bending across sharp edges, and abrasion. In yachting ropes, aramid only plays a minor role. This fiber is produced by DuPont (Kevlar®) and Teijin (Twaron®). In the Yachting Rope segment, aramid fibers are mainly used in places where high temperature resistance is essential, for example on winches. They are ideally suited for use on winches. However, due to their low resistance to bending over sharp edges, they should not be used on stoppers.

► Polyester (PET)

PET stands for good breaking strength and low elongation. It offers both chemical and physical benefits such as resistance to seawater, good abrasion resistance (in both dry and wet conditions), and good resistance to sunlight. This makes PET a go-to choice in the production of many yachting lines. It is used as a core material for halyards, sheets, mooring lines, and anchor lines. On high tech cordage, polyester is used as the cover material. The outstanding characteristics of polyester speak for themselves. Since polyester sinks, it can also be used for anchor lines. For high tech yachting ropes, it is used as a cover material (UV protection), while for simple yachting ropes it is also used in the core.

► Polyamide (PA)

Polyamide provides high breaking strength as well as high elongation. The abrasion resistance of PA is better in wet than in dry conditions, as the fiber tends to absorb water (up to 7%). Kept in contact with moisture for too long, the material can become stiff. Another downside of PA compared to polyester is its comparatively lower UV resistance. This is why PA is increasingly being replaced by polyester. Polyamide is still widely used for mooring ropes and all-round lines.

► Polypropylene (PP) = XLF

Due to its limited technical properties, polypropylene is only used for simple applications. PP is extremely lightweight and even buoyant. Its abrasion strength and temperature resistance are adequate. Typically, it is used for simple mooring lines or for all-round lines.

Overview of products

Material	Starting material	Strength daN/mm ²	Specific gravity kg/dm ³	Water absorption %	Resistance to sunlight	Elongation at workload %	Abrasion resistance	Creep	Melting point C°

Expertise from more than 225 years of experience

What started back in 1790 as a simple shop making hemp ropes has since evolved into a globally successful group of enterprises specializing in the development and production of fiber and steel wire ropes as well as strapping.

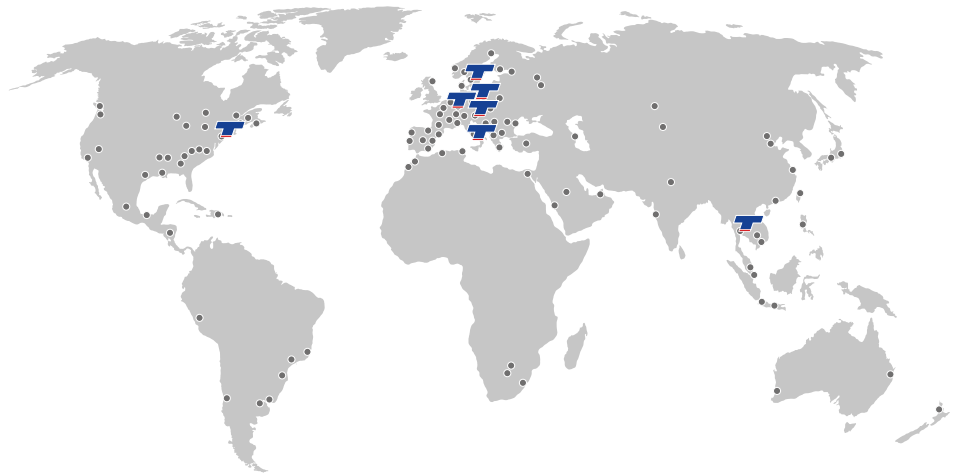

Great diversity

TEUFELBERGER's products and services are destined for a wide variety of applications ranging from cranes and marine applications to packaging and through to personal protection. The continuity and stability of a family enterprise makes us a reliable partner who, competently and effectively, supports you in mastering your day-to-day challenges.

Global presence and customer proximity

Manufacturing operations in various countries allow us to meet local quality and certification standards as well as customer requirements without difficulty. From our sites in Austria, the Czech Republic, the U.S., Italy, Sweden, and Thailand, and backed by a close-knit global network of distribution partners, we continue to satisfy the expectations of our customers.

Innovative solutions through synergies

TEUFELBERGER is a leading specialist for fiber and steel wire ropes as well as strapping. The spectrum of technologies in TEUFELBERGER's portfolio generates various synergies between the extrusion of thermoplastics, the braiding of high performance fibers, and the processing of wires into ropes and strapping.

Especially fiber and steel wire products have brought about valuable synergies with regard to both application and manufacturing technologies, which have benefited our customers tremendously. This makes TEUFELBERGER your ideal partner right from the project planning phase.

5% of TEUFELBERGER's employees are active in research and development and make sure that our customers have access to the latest innovative rope technologies. 10% of the entire investment volume is committed to development and quality assurance.

Information about product specifications

Product nomenclature

Ø	Length	MBL	Weight	Color/Item no.				
mm	m	daN	g/m	grey-red	green-neon-green-grey	black-grey-anthracite	blue-grau-anthracite	navy-pink
6	200	2.200	25	0713	3405	3415	3614	1572

Cover: Cover material **Core:** Core material

Ø = diameter (mm)

The nominal diameter is always the maximum diameter

Length = rope length (m)

The rope's length is measured taking EN ISO 2307 into account. rope length: per spool or coil

MBL = minimum breaking loads

The value in daN (1 daN is about 1 kg) indicates the load at which the rope would break. The specified breaking loads are values determined in testing in our laboratory. In practical use, these values may deviate depending on the type of use. The breaking loads were determined for free lengths of rope and

will be decreased by splices or knots. When defining a rope's dimensions, we recommend to apply a ratio of working load to breaking load of at least 1:5!

Weight = weight per meter (g/m)

The specified values in grams relate to one meter of rope. The length of the rope can change during use. As a result, there may also be deviations from the specified weight.

Colors and order numbers

Example: the color "blue-grey-anthracite" with Ø 6 has the Item no. 3614

Identification Field of Use

HALYARD

This line is ideally suited for use as a halyard.

SHEET

Due to its low abrasion and minimal kink, this line is ideally suited for use as a sheet.

CROSSOVER

This line is suited for use as both a halyard and a sheet.

TRIMM

This line can be used as a control line, stretcher, or all-round rope.

MOORING LINE

This line is suited for mooring all kinds of boats.

ANCHOR LINE

This non-buoyant line is used for anchoring.

Halyards and sheets*

Your boat m	Ø mm halyards			Ø mm sheets		
	Spi	Genoa	Main	Spi	Genoa	Main

9	4	12	14
10	5	12	16
11	7	14	16
12	8	14	18
14	11	16	20
16	12	18	20
18	20	24	24
24	22	26	26

*When using lines made of Dyneema®, the diameter can be reduced by 2mm! The specified values are experience-based values of Robline®. They are average values which, however, can vary from one yacht type to another.

⚠ WARNING

The misuse of ropes can be dangerous. Our products may only be used for the purpose they are designed for. Do not use them for personal protection or lifting purposes as specified in EU Directive 2006/42/EC, unless the products are clearly identified as suitable for such purposes under relevant standards. The user is responsible for the proper application and supervision of the rope's use and assumes the user is familiar with the necessary safety precautions. We recommend a splice as end connection for all of our products. For Dyneema® products (such as Ocean 3000 XG for example) a splice is the only option that should be used, as knots can come undone under a load.

Elongation

The following diagram shows the elongation as a function of the applied load for a number of fibers that are common in Robline ropes. In general, one speaks of work load at 20% of the breaking load specified in the catalog. This red line is intended to clarify which elongation values the different fibers show under working load compared to full utilization of the breaking load. If you look closely at this diagram, you can draw the conclusion that all high-tech fibers used by Robline exhibit less than 2% elongation when used under normal working loads. Only conventional polyester, polyamide and polypropylene stretch more, which in turn can be an advantage in certain applications.

Breaking Load vs Elongation at Break - Fiber Properties

How to choose the right product?

- ▶ Pre Definitions: size of Clutches/Jammers (Ropeclamp)
 - size of Blocks
 - size of Selftailing head on winch (Selftailing-Attachement) on the winch
- ▶ Define maximum working load
- ▶ Use rope that „consumes“ only (max.) 20% of available tensile strength

	Elongation (%)	Elongation (cm)
GP	below 0,3	<6
High Tech	0,3 - 1	20
Cruising	2-3	40-60
